

Top Home Alarm Monitoring Company, Alarm Relay, Announces New Services Available on iPhones and Android Devices

Features offered with Alarm Relay's new services grant users complete control of their alarm system, anywhere in the world, from the convenience of a mobile application.

San Diego, CA ([PRWEB](#)) April 30, 2014 -- Alarm Relay, Inc., a nationwide leader in [security system monitoring](#) including [home alarm monitoring](#), today announced new products and services to enable interactive features designed for use on an iPhone or Android. Alarm Relay, Inc.'s new products allow clients remote management for security system control and remote access management including lights, locks, and thermostats. Features grant users complete control of their security system, anywhere in the world, from the convenience of a mobile application using WiFi and cellular.

The vast majority of [alarm monitoring companies](#) require clients to purchase a new system to utilize interactive services through a SmartPhone. After purchasing the system to access interactive alarm control, customers are usually locked into a three to five year contract at a very high monthly rate. With Alarm Relay's new internet and cellular modules, customers will not be required to replace their existing [security monitoring system](#) and will not be locked into any long-term contracts. Alarm Relay's units are capable of working with most existing alarm panels on the market. In addition, interactive services through an app are available on more than thirty of the industry's most popular alarm systems.

Alarm Relay provides innovative internet [alarm monitoring](#) solutions for clients. The newest internet alarm module offers secure alarm monitoring through IP transmission. In addition, the module easily connects to an existing WiFi network and can provide remote capabilities to allow optimum security at all times.

Another exciting product released by Alarm Relay is a CDMA and IP combination unit. The device uses ethernet cable to provide internet as the main communication to the alarm and a cellular connection utilizing CDMA technology for redundancy. "With many cellular companies restructuring their network, and eliminating 2G towers, these modules allow customers to leverage modern technology to retrofit their existing alarm," said Paolo Piscatelli, COO, Alarm Relay, Inc. Furthermore, users will be able to access a wide range of mobile functionality through their iPhone or Android device, making this module a prime alarm communicator for [home security monitoring](#).
