

RE656: HeliPAD™ Wireless Interactive Keypad

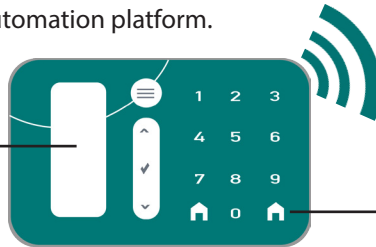

Smart and Simple Security

The HeliPAD is a fully wireless, full status security keypad delivering several firsts to the security industry. The HeliPAD is the first keypad to use a supervised Bluetooth Smart™ connection to provide two-way wireless communication with an alarm panel. It is also the first keypad to use e-ink technology (similar to what is used in the Amazon® Kindle) to provide real-time status updates. This low power, high contrast display ensures easy reading in high and low light conditions. The keypad itself uses capacitive touch delivering a sleek, clean finish for the customer. HeliPAD has an expected battery life of 1 year on two AAA Alkaline batteries that can be easily replaced by the customer.

Compatible with Resolution's Helix™ security and automation platform.

Real-time display of status without pressing a button. Detailed information is a  button press away.

Long-range RF signaling to the Helix panel using Bluetooth Smart technology

Utilizes capacitive touch (non-mechanical) buttons for a clean modern appearance. Touch feedback can be programmed as a click or beep based on customer preference.

Key Features

Fully arms system whether to home or away mode with the touch of a button

No smart phone application required to arm/disarm Helix. Perfect for families with children too young for cell phones or for those with keypad preference

Checks system for open zones and notifies the user when and where there's trouble
